

SmartTOP add-on Convertible Top Controller for Bentley Continental GTC Convertible reduced in price

Aftermarket automotive electronics specialist Mods4cars has permanently lowered the price for the SmartTOP Convertible Top module for the Bentley GTC Convertible. The kit is now available for 299 Euros + tax. It allows owners to open and close the top while driving at slow speeds as well as from the original factory remote fob, offering convenient one-touch operation for both.

Las Vegas, Nevada – August 29th, 2013

Mods4cars has lowered the price for the SmartTOP Convertible Top Module for Bentley Continental GTC permanently and effective immediately. The new sale price is now set at 299 Euros + tax. "The Bentley customer love to drive in comfort and our product offers just that when it comes to using the convertible top." says PR-Manager Sven Tornow. So it is possible to operate the top while driving slowly and with just a single touch. It is no longer necessary to hold down the switch for the entire time. A quick tap automatically raises or lowers the top.

Additionally the top can now be controlled from the original key fob remote. Also here a convenient one-touch operation completes the cycle automatically without the need to hold down any button. "On hot days the convertible top can already be opening before you reach the car. Likewise the top can quickly be closed at the first sight of rainfall, without any need to rush to the car." Sven Tornow continues. The original key fob doesn't need to be modified.

The module also brings a few neat bonus features to the table: Starting or stopping the engine can be programmed to not interrupt an ongoing top operation. The windows and top can be controlled independently and separately by remote, so it is possible to just air out the car by lowering the windows. The entire module can be deactivated temporarily while retaining all other user settings. All functions and settings are user programmable.

The SmartTOP module comes equipped with a standard USB port for quick and easy configuration or firmware updates. Mods4cars regularly offers firmware and feature updates which are available free of charge for new and existing customers. Support software for Mac OS and Windows is available online at www.mods4cars.com.

After the recent price reduction the SmartTOP Convertible Top kit for the Bentley Continental GTC is now available for just 299 Euros + tax. Another kit offered by Mods4cars allows use of the TV and DVD player equipment by the passenger while the car is in motion. The TV bypass module can be enabled or disabled on the fly via a simple button sequence on the steering wheel.

SmartTOP Convertible Top kits are available for: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
