

SmartTOP add-on Convertible Top Controller for Peugeot 207CC receives enclosure upgrade

The aftermarket SmartTOP Convertible Top Controller made by Mods4cars for the Peugeot 207CC convertible now ships with a new, custom designed product enclosure. This exclusive enclosure is smaller and easier to install in the car. Adding the SmartTOP convenience is now easier than ever.

Las Vegas, Nevada – October 22nd, 2013

Owners of a Peugeot 207CC convertible can make using their top more fun with the SmartTOP Convertible Top Controller made by Mods4cars. The add-on kit allows use of the top while driving at slow speeds of up to 50 km/h (~28 mph) and with one-touch convenience.

The top can also be raised or lowered with the factory key fob remote by using an intuitive key press sequence. It is no longer necessary to stop and pull over or run to the car in case of sudden rainfall; or the top can be opened while approaching the car.

Aftermarket electronics specialist Mods4cars completely revamped the design of the SmartTOP module enclosure. Effective immediately all modules for the Peugeot 207CC come equipped with the new, slim plastic enclosure. The smaller, more elegant shape allows for much easier installation in tighter spaces. Two nicely integrated LEDs show the current status of the product. Also included in the kit is a plug-in-between wiring harness which makes connecting the module itself to the vehicle electronics a quick and painless affair.

“Our new plastic shell was custom designed just for our SmartTOP modules.” says PR-Manager Sven Tornow. “It neatly encloses all parts like the main connector, LEDs and the USB port. The two LEDs make installing even easier by showing detailed status or trouble information with two colors.” Sven Tornow continues.

Also the programming of the user configurable settings is an easy and straightforward affair: All functions and settings are shown in the in-dash LCD in plain text. Apart from the main functionality the product offers a host of bonus features such as separate window and top control from the remote, one-touch window close operation for the console switch and an extended mode which allows turning the ignition on or off while the top is still moving. The entire module can also be temporarily disabled while retaining all user settings.

Mods4cars continually works on improving existing products. The standard USB port now present on all products helps owners to easily configure or update the module firmware. Updates are provided free of charge online. End users can easily keep their module up to date and profit from new features down the road.

Mods4cars SmartTOP modules are available for: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and VW.

The SmartTOP kit for Peugeot 207 CC convertible is available for 209 Euros + tax. Equivalent kits are also available for Peugeot 307CC and 308CC.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
