

SmartTOP Convertible Top Control Module for Lamborghini Gallardo Spyder available soon

The SmartTOP aftermarket Convertible Top Control Module for Lamborghini Gallardo Spyder will be available soon. The add-on kit allows using the top with one-touch convenience while driving at slow speeds as well as controlling the top and windows from the original key fob remote. It is possible to reverse the direction in which the console top switch needs to be pushed or pulled.

Las Vegas, Nevada – March 11th, 2014

Aftermarket automotive specialist Mods4cars, manufacturer of the add-on SmartTOP kits, just announced that the new module for Lamborghini Gallardo Spyder will be available within the next couple of weeks. "We are happy to be able to bring our signature convenience features to owners of Lamborghini Gallardo owners very soon. In addition to the main features we were able to integrate a lot of extra functionality that makes owning the convertible so much more fun." says PR-Manager Sven Tornow.

The SmartTOP Convertible Top modules allow drivers to open and close the top while driving at slow speeds and with one-touch convenience. It is no longer necessary to pull over and hold down the switch for the duration of the operation. The top may be used up to a user programmable speed of 40km/h (~28mph). Thanks to the one-touch feature it is not necessary to keep holding the switch down. A quick tap is enough to start full automatic top operation.

Additionally the top can be operated from the original factory remote key fob. This allows owners to lower the top while still approaching the car. The top can also be closed fully automatically while walking away or from afar at the first sign of impending rainfall. No changes are necessary to the original keys or receiver system.

The SmartTOP module for Lamborghini Gallardo Spyder also offers a host of bonus features. A highlight is the ability to reverse the direction of the center console switch. Instead of pulling to lower and pushing to raise the top, the direction can be reversed to work in a much more intuitive way, if desired.

More features are available, all of which can be user configured according to taste. The windows can be activated by remote independently from the top, a chirp feature gives off brief horn signals upon locking or unlocking the car, hazard blinkers can be activated during remote top operation. An extended mode allows owners to even start or stop the engine while the top continues full automatic operation. It is also possible to temporarily disable the entire module while retaining all other settings.

Every SmartTOP module can be configured and updated via the integrated USB port and available support software for PC and Mac. Software and product firmware updates are available online, free of charge.

The SmartTOP Convertible Top kit for Lamborghini Gallardo Spyder will be equipped with the new, custom designed Mods4cars product enclosure. This custom designed plastic shell was specifically designed for the SmartTOP product, is very sleek and slim and offers perfect protection for the embedded connectors and LEDs. A plug and play wiring harness is also part of the kit. It allows a very quick installation of the module by simply connecting a few plugs with the car electronics.

Mods4cars offers kits for the following popular brands: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and VW. The add-on kit for the Lamborghini Gallardo Spyder will be available for 249 Euros + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
