

## **New: SmartTOP Convertible Top Controller by Mods4cars for Infiniti Q60 Convertible**

*The popular aftermarket SmartTOP Convertible Top Controller offered by Mods4cars is now also available for the new Infiniti Q60 Convertible. It allows opening and closing of the top at slow speeds and with one-touch convenience. Additionally the top can be controlled by remote with the original factory key fob.*

### **Nevada, Las Vegas – September 17th, 2015**

Effective immediately the SmartTOP add-on Convertible Top Controller is also available for the Infiniti Q60 Convertible. Mods4cars now has its smart solution available for Infiniti's latest convertible. Owners of the Infiniti G37 Convertible have already been enjoying the added convenience since 2011.

The add-on kit allows owners to open and close their convertible top at slow speeds of up to 40 km/h (~28mph). A quick tap on the console switch is enough. It is not necessary to hold down the switch for the duration of the operation. Since the cumbersome stopping, pulling over and holding of the switch are no longer required, the car is used top-down much more often.

“Our product also allows owners to lower or raise the top from a distance using just the original key fob remote.” explains PR-Manager Sven Tornow. “No separate remote is required and no changes are necessary to the existing keys.” he continues. SmartTOP customers can lower the top of their car, for example, while still approaching.

The SmartTOP for the Infiniti Q60 Convertible also comes with a host of bonus features, all of which are individually programmable. The windows can be controlled at once by remote from the outside or by quick double-click with the roof switch from the inside. Doors can be set to auto-lock while driving. Locking and unlocking the car can produce a short beep signal if desired. An extended mode can be activated which allows the engine to be started or stopped while an ongoing top operation still continues. The entire module can be temporarily disabled while retaining all other user settings for when it is later re-enabled.

The SmartTOP module comes equipped with a standard USB port and can be connected to a Mac or PC for quick and easy configuration or firmware updates. Support software and firmware updates are available online and free of charge. Installation of the kit is extremely easy thanks to a custom designed plug-in-between wiring adapter which uses OEM connectors. It connects the SmartTOP with the vehicle electronics in a safe and foolproof way.

The add-on kit for the Infiniti Q60 Convertible is available for 249 Euros + tax.

Mods4cars makes SmartTOP Convertible Top Controllers and Convenience add-on modules since 2002. Most popular brands are supported, such as: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and Volkswagen.

**About Mods4cars:**

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
