

## **SmartTOP Add-On Convertible Top Controller for Infiniti G37 receives Enclosure Upgrade**

*The aftermarket SmartTOP Convertible Top Controller for the Infiniti G37 now comes in the exclusive Mods4cars product enclosure. The module is very slim and offers help during installation. This makes it even easier to get the ultimate convertible top convenience.*

**Las Vegas, Nevada – December 18th, 2015**

Infiniti G37 Convertible owners can enjoy a simpler and more convenient top operation with the SmartTOP Convertible Top Controller. The add-on kit offered by automotive electronics specialist mods4cars allows opening and closing of the top while driving at slow speeds of up to 40 km/h (~28mph) with one-touch convenience. It is no longer necessary to stop, pull over and hold down the switch for the entire duration of the operation.

Additionally the top can be controlled from the original factory key fob remote. A quick combination on the key fob puts the top in motion. This allows owners to air out the car before driving or to close the top of the parked car at the first sign of an impending rainfall.

SmartTOP modules also come with bonus features. The one for the Infiniti G37 offers the following features in addition to the aforementioned two main functions: The windows can be controlled by remote separately from the top. A quick double-click on the console switch acts as a convenience open and close command for all windows at once. Hazard blinkers can be activated during remote top operation. A short beep signal can be activated when locking the car by remote and the doors can be set to auto-lock when driving off. An extended mode can be activated which allows starting or stopping of the engine while the top keeps running and last but not least, the entire module can be temporarily disabled while retaining all user settings for when it is re-enabled later.

Programming the individual user configurable settings is simple via software that is available for PC and Mac. The SmartTOP module comes with a built-in USB connector. The software allows easy configuration of all settings and module firmware updates. Support software as well as updates are available online free of charge.

Mods4cars continually works on improving the products over time. Effective immediately the module kits for the Infiniti G37 Convertibles come equipped with the new module enclosure. The enclosure was exclusively designed for this purpose, is smaller and fits in even tighter locations in the car. Two LEDs now clearly show the operating state of the module and thereby help during installation. The kit also comes with a custom full plug-in-between wiring adapter using only OEM plugs and connectors for a quick, perfect and secure connection between the module and the car electronics.

The SmartTOP Convertible Top kit for the Infiniti G37 and Q60 Convertible is available starting at 249 Euros + tax. SmartTOP kits are available for the following popular brands: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and VW.

**About Mods4cars:**

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
