

SmartTOP Add-On Convertible Top Controller for BMW 6 Series gets new design

Manufacturer Mods4cars has completely overhauled the design of their SmartTOP Convertible Top Controller modules. Now the kits for BMW 6 Series Convertibles ship with the new product design. When the SmartTOP is installed, it is possible to open and close the top while driving at slow speeds and with one-touch operation. Additionally the top can be operated from afar using the original key fob remote.

Las Vegas, Nevada – January 26th, 2016

Effective immediately, Aftermarket Electronics Specialist Mods4cars ships the SmartTOP modules for BMW 6 Series E64 and F12 with the new custom designed module enclosure. The Add-On kit enables owners amongst other things to open and close the convertible top from the original key fob remote. The original keys do not need to be modified or reprogrammed.

Additionally the convertible top can be operated with convenient one-touch operation after the SmartTOP is installed. A quick touch is enough to start the full automatic process. Thanks to this feature it is possible to quickly close the top at the first sign of impending rainfall while returning both hands to the steering wheel immediately.

Bonus features further enhance the comfort: The windows can be opened or closed from the remote independently from the top. The doors can be programmed to unlock automatically when turning the ignition off in order to avoid having to pull the door handle twice. An extended mode can be activated which allows a top operation to continue while the engine is being started or stopped. The entire module can be temporarily disabled while retaining all other user settings for when it is re-enabled later. The module can be removed without leaving any trace or damage.

All functions can be programmed according to individual needs. The SmartTOP modules come with a built-in USB port. A Mac or PC can be connected to quickly configure the module or update the firmware. Mods4cars continually works on implementing new features and improving functionality while always considering customer wishes and input. Support software and firmware updates are available online, free of charge.

Now Mods4cars has optimized the hardware of the SmartTOP module itself. The custom designed module enclosures are 30% smaller, which means the module can be installed in even tighter spaces in the car. Two LEDs now signal the status and help during installation. The included plug-and-play wiring harness makes installation quick and easy by just plugging in a connector.

The convenience add-on for BMW 6 Series Convertibles is available for 299 Euros + tax. Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo: SmartTOP Add-On kits are available for almost all popular brands and models of Convertibles and Roadsters.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
