

## **SmartTOP Add-On Convertible Top Controller for Porsche Boxster 981 gets design upgrade**

*Aftermarket automotive electronics specialist Mods4cars has revamped the design of their SmartTOP Convertible Top Controllers. Effective immediately the kit for the Porsche Boxster 981 comes with the new enclosure. With the SmartTOP installed it is possible to open and close the top from a distance using the original factory remote fob. Additionally, convenient one-touch operation while driving is available for the center console switch.*

### **Nevada, Las Vegas - August 23, 2016**

Mods4cars has begun shipping their SmartTOP Convertible Top Controller module for the Porsche 981 Boxster equipped with the new product enclosure. One of the signature functions of the add-on kit is the ability to control the top from a distance by just using the factory key fob. The original fobs do not need to be modified or replaced.

Additionally owners can open or close the top, even while driving at slow speeds, with just the touch of a button. It is no longer necessary to hold down the switch for the duration of the operation. The driver gets to put both hands back on the wheel quickly.

The SmartTOP comes with a handful of bonus features that further add convenience: The windows can be controlled separately from the top by remote. It is possible to reduce the radio volume when starting the car and an extended mode can be activated which allows the engine to be started or stopped while an ongoing top operation continues. The entire module can be temporarily disabled while retaining all user settings for when it is re-enabled later.

All functions and settings can be programmed to individual taste. SmartTOP modules come with a built-in USB port for quick configuration and firmware updates via Mac or Windows PC. Mods4cars is invested in continually improving their products and always listens to customer input. Support software and firmware updates are available online, free of charge.

Now Mods4cars has optimized the hardware of the SmartTOP module as well. The exclusive, custom designed enclosures are 30% smaller and thereby allow installation in even tighter places in the car. Two LEDs show status information and aid during the installation.

The convenience add-on kit for the Porsche Boxster 981 is available for 269 Euros + tax.

Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo: SmartTOP kits are available for all popular brands and models.

**About Mods4cars:**

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
