SmartTOP roof module by Mods4cars is now available for the Lamborghini Huracán Spyder

SmartTOP, the additional convertible top control for the Lamborghini Huracán Spyder is now available. The retrofit comfort module by Mods4cars allows the folding top to be opened and closed remotely via the original vehicle key. In addition, the roof can be operated via the interior button via one-touch. Cumbersome pressing is thereby eliminated.

Las Vegas, Nevada – January 11, 2018

As of now, the company Mods4cars has a SmartTOP convertible top control available for the Lamborghini Huracán Spyder. "We are very pleased that we can now also offer a SmartTOP solution for this exclusive super sports car," explains PR spokesman Sven Tornow. "The predecessor, Lamborghini Gallardo Spyder, has already been supported by us for several years."

The retrofit SmartTOP module enables, among other things, the operation of the top via the console button via One-Touch. Opening and closing the convertible top no longer requires continuously holding down the button. A short tap is enough and the movement of the hood is executed automatically.

Furthermore, the SmartTOP module makes it possible to operate the top remotely from a distance using the original vehicle key. By pressing a key combination on the key fob, the roof can be opened and closed. "The SmartTOP customer can already open their top as they approach their vehicle and start their journey top down," explains PR spokesman Sven Tornow. A change to the vehicle key is not required for this function.

This convertible top control from Mods4cars also offers various other additional functions: Windows can be opened and closed separately by remote control. Windows can be programmed to be raised after the top opening. For vehicles with a keyless entry package, the top movement can be triggered by touching the door handle. The operating direction of the top button can be reversed if desired.

All functions are individually programmable. Starting or stopping the engine does not interrupt the current top movement. The module can be deactivated at any time. A built in USB port to the SmartTOP module makes it possible to install software updates that are provided free of charge. In addition, the module can be configured via the PC / MAC.

The SmartTOP module comes with a plug-and-play adapter. Connection between SmartTOP module and vehicle electronics is made by simply plugging together. No cables need to be cut, which is why a traceless dismantling is possible at any time.

Mods4cars has been manufacturing SmartTOP top controls since 2001, for all common convertible modules. The following vehicle brands are supported: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The SmartTOP module for the Lamborghini Huracán Spyder is available for 299.00 Euro + tax.

###
About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
