SmartTOP convertible top control by Mods4cars is now available for Maserati GranCabrio

The SmartTOP additional convertible top control by the company Mods4cars is now available for the Maserati GranCabrio. The retrofit Cabriolet module allows for the operation of the top while driving with One-Touch function. In addition, the top can be opened and closed from a distance via the existing vehicle key.

Las Vegas, Nevada - April 4, 2018

The manufacturer, Mods4cars, announced that the retrofit SmartTOP convertible roof control for the Maserati GranCabrio is now available. "We are pleased to be able to offer a smart comfort module for the Maserati GranCabrio and thus support yet another exclusive vehicle brand," said PR spokesman Sven Tornow.

The SmartTOP roof module is retrofitted to the vehicle and with clever additional functions makes the everyday cabriolet life easier. With it, among other things, One-Touch operation of the top is made possible. Just a short tap and the movement of the top is executed automatically. The interior key no longer needs to be held down continuously.

Furthermore, the operation of the top from a distance via the original vehicle key is also made possible. By pressing a key combination on the remote control, the top can be opened and closed remotely. "This way our customers can open their top as they move toward their vehicle. Conversely, it is possible to remotely close the top, should it suddenly start to rain, for example." explains Sven Tornow further. A change to the vehicle key is not required for this function.

Like every SmartTOP, the comfort module for the Maserati GranCabrio also offers other additional useful functions. Programming of the front or all windows, as to whether they should close automatically after the top opens, is now possible. In addition, the windows can be opened and closed via the key fob remote. Starting or stopping the engine does not interrupt the current top movement. The module can also be deactivated at any time.

All functions of the SmartTOP roof module can be programmed according to personal wishes. A USB port attached to the SmartTOP module allows for connection to the home PC/Mac. This allows the roof module to be conveniently configured. It also makes it possible to install software updates which are provided free of charge, by Mods4cars.

The included plug-and-play adapter and easy access make it easy to install. By simply plugging together, the connection between SmartTOP and vehicle electronics is established. No cables need to be cut; thus a traceless dismantling is possible at any time.

The convertible top control for the Maserati GranCabrio is available for 339.00 euro + tax.

Mods4cars offers SmartTOP comfort modules for the following vehicle makes: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
