

## **Mods4cars RemoteKEY comfort control for Mercedes-Benz in a new casing**

*The RemoteKEY comfort control for Mercedes-Benz has been given a new casing. The retrofit module by the company, Mods4cars, provides smart functions for greater user comfort. Amongst other things, windows can be operated via the original remote control. In addition, a TV-in-motion feature is included.*

### **Las Vegas, Nevada – June 20, 2018**

The company, Mods4cars, has revised the design of their RemoteKEY comfort modules. As of now, the RemoteKEY for Mercedes-Benz will be shipped in its new casing. A retrofit control, which provides more comfort and numerous additional functions.

The RemoteKEY comfort control makes it possible, among other things, to open and close the windows via the existing original remote control. In addition, the sunroof can be opened and closed via the vehicle key fob. If wanted, the chirp function sounds a short horn signal when the central locking is activated. Thanks to the RemoteKEY module, the central locking system locks and unlocks during or after the drive. Via remote control, headlights can be activated to help finding the vehicle.

In addition, the RemoteKEY comfort control includes a TV-in-motion feature. This enables activation of TV and DVD playback during the drive. Now passengers can operate the entertainment system and play DVDs during longer journeys. As the module is installed into the vehicle, the functions remain even after inspection work by a workshop. The activation and deactivation of the TV-in-motion feature is done via a key combination on the steering wheel.

The comfort control can also be completely deactivated as needed. All functions are programmable according to personal wishes. The USB port attached to the RemoteKEY assists with this, making it possible to configure the control on the PC and run software updates, which Mods4cars provides free of charge.

Since 2002, Mods4cars has been developing retrofit comfort and convertible controls for all common vehicle brands. "The basic idea of our products is to make the operation of individual processes in the vehicle easier and more comfortable," explains PR spokesman Sven Tornow. "With the new casing, we have now also simplified the installation of our modules," Sven Tornow continues. Two LEDs attached to the module help with the installation and the narrower shape makes the RemoteKEY easier to install into the vehicle.

Retrofit Convertible and Comfort Modules by the company Mods4cars are available for the following vehicle brands: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The RemoteKEY comfort control is available for 209.00 Euro + tax for the following Mercedes-Benz models: C-Class (203), E-Class (211), S-Class (220), ML-Class (W164), GL- Class (X164) and R-Class (W251 / V251).

**About Mods4cars:**

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
