

SmartTOP convertible top control for Mercedes-Benz SL with various new functions

The SmartTOP additional convertible top control for Mercedes-Benz SL (R231) enables One-Touch top operation while driving as well as operation of the top via the vehicles key. The manufacturer, Mods4cars, has now added numerous new features to the cabriolet module to increase ease of use.

Las Vegas, Nevada – November 29, 2018

The retrofit SmartTOP convertible top module for the Mercedes-Benz SL (R231) Roadster makes it possible to open and close the convertibles top while driving at speeds of up to 60 km/h. For this function, thanks to the One-Touch feature, only a short tap on the interior button is needed. In addition, the convertible top can be operated remotely via the existing vehicle key.

"We see our SmartTOP Cabriolet modules as comfort controls," says PR spokesman Sven Tornow. "With our sophisticated functions, we want to make the usability as easy as possible. We also like to respond to customer requests," Sven Tornow explains. Therefore, numerous additional functions have now been added to the SmartTOP top control.

It is possible to reverse the operating direction of the tops control button. The side mirrors can be folded open or closed via remote control. The Comfort Wipers function ensures that when using the spray nozzles, after a 10-second pause, the wipers automatically wipe again.

The trunk can be opened and even closed via the remote control. The seat memory keys can be operated with One-Touch. With the entry and exit assist, pre-programmed seat positions are automatically operated when entering and exiting the vehicle.

The ECO Disable function allows automatic deactivation of the ECO mode when starting the engine, which otherwise usually reactivates each time the vehicle starts up. Furthermore, it is possible to lock the vehicle while the engine is running. This makes it possible to leave the vehicle and continue to air-condition it.

Existing customers can also benefit from these new features. SmartTOP Cabriolet modules are equipped with a USB port, making it possible to upload software updates via PC / Mac. The manufacturer, Mods4cars, provides these updates free of charge to all customers via the Internet.

SmartTOP Convertible top controls are available for the following vehicle brands: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The SmartTOP comfort control for Mercedes-Benz SL (R231) Roadster is available from 339.00 Euro + tax.

About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
