

SmartTOP cabriolet top control for Jaguar F-Type Convertible with new functions

The SmartTOP convertible top control for the Jaguar F-Type Convertible allows the top to be opened and closed from a distance using the original vehicles key. In addition, the top can be operated via the interior key with One-Touch. Now, many new features have been added to the cabriolet module.

Las Vegas, Nevada – July 10, 2019

The retrofitted SmartTOP convertible module for the Jaguar F-Type Convertible provides a comfortable convertible top operation with its clever functions. On one hand, it is possible to operate the convertible top while driving with One Touch. The convertibles top button no longer needs to be held down throughout the entire movement of the top. Instead, a brief tap on the interior button is sufficient and the top movement is carried out automatically.

In addition, the SmartTOP convertible top control by Mods4cars enables the operation of the top via the existing vehicle remote control. "Opening and closing the convertibles top from a distance using the vehicles key is a very popular feature. Our customers can already open their convertibles top as they walk toward their vehicle," explains PR spokesman Sven Tornow. A change to the vehicle key is not required.

Now the SmartTOP module has received many new features. It is now possible to reverse the operating direction of the convertibles top interior button. Valet mode prevents operation of the convertibles top via the interior button and remote control. Thus, the top can be completely locked when third parties use the vehicle. The ECO Disable function allows automatic deactivation of ECO mode when starting the engine, which ordinarily would be reactivated each time the vehicle starts up.

In addition, the exhaust flap button in the vehicle can be automatically activated at every start. "From manufacture settings, the flaps are deactivated each time you start your journey. However, the SmartTOP module remembers the setting of your last journey or can be programmed so that the exhaust flaps are activated at every start," says PR spokesman Sven Tornow.

Existing customers can also benefit from these new features. Software updates can be loaded via the USB port attached to the SmartTOP module. The manufacturer, Mods4cars, provides these updates free of charge to all customers via the Internet.

SmartTOP modules are available for the following car brands: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The SmartTOP comfort control for the Jaguar F-Type Convertible is available from 339,00 Euro + tax.

About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
