

## **SmartTOP Cabriolet module for Bentley Continental GTC now with Plug and Play adapter**

*The SmartTOP convertible top control for the Bentley Cabriolet is now available with a new Plug and Play adapter. With it the manufacturer, Mods4cars, ensures an even easier installation. The retrofitted convertible module allows the convertibles top to be operated while driving. In addition, the top can be opened and closed from a distance using the vehicles key.*

### **Las Vegas, Nevada – August 13, 2019**

The company, Mods4cars, has further developed the harness of its SmartTOP convertible top control for the Bentley Continental GTC. The retrofit SmartTOP convertible module now comes with a plug and play adapter. The specially developed wiring with connectors in OEM quality enables simple plug-in installation.

"During the installation of the module, only exact fitting plugs are connected. There is no longer any need to connect individual cables," explains PR spokesman Sven Tornow. "This way anyone can install the additional control quickly and easily to enjoy the comfort and functions of the SmartTOP module," Sven Tornow continues.

With the installed SmartTOP convertible top control, it is possible to open and close the convertible top while driving at a speed of up to 40 km/h. Thanks to One-Touch function, all you need to do is tap the tops button. It is no longer necessary to keep the button pressed during the entire tops movement.

Furthermore, the convertible top can be operated from a distance via the existing vehicle key. "On hot days, our customers can already open their convertibles top as they move toward their vehicle," says PR spokesman Sven Tornow. In the reverse case, the open parked vehicle can also be closed from a distance should it suddenly start to rain. No change to the vehicles key is needed for this function.

Moreover, the following additional functions are also included: Windows can be opened and closed separately via remote control. Optionally, the hazard warning lights can be activated during the convertible tops movement via remote control. Starting and stopping the engine does not interrupt the current tops movement. The module can be completely deactivated when required.

The module is programmed according to your personal wishes. Configuration is possible directly in the vehicle or via a PC/Mac. The SmartTOP modules come with an USB port, which allows for connection with the computer. In this way, software updates, provided by Mods4cars free of charge, can also be installed.

SmartTOP additional convertible top controls are available for the following vehicle brands: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The comfort gain for the Bentley Continental GTC is available for 339.00 Euro + tax.

**About Mods4cars:**

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
