

SmartTOP convertible top control for the BMW 6 Series permanently reduced in price

The manufacturer Mods4cars has permanently reduced the price of its retrofitted SmartTOP convertible top control for the BMW 6 Series (E64). The SmartTOP module now costs 169 Euro + tax. It enables the convertible top to be operated while driving via One-Touch. In addition, the top can be opened and closed from a distance using the existing vehicles remote control.

Las Vegas, Nevada – October 29, 2019

The SmartTOP manufacturer Mods4cars is pleased to announce a price reduction for BMW 6 Series Convertible owners. The retrofitted additional convertible top control for the BMW 6 Series (E64) is now permanently lowered in price and is now available for 169 Euro + tax. "We hope that even more convertible drivers will be able to enjoy our sophisticated additional functions and thereby enjoy their top down driving experience more," says PR spokesman Sven Tornow.

The SmartTOP convertible top control is a complementary module providing valuable functional extensions to the convertibles top. With it the top can be opened and closed while driving at a speed of up to 40 km/h. Thanks to the One-Touch function, a brief tap on the convertibles top button is all it takes for the operation to be carried out automatically.

It will also be possible to operate the convertibles top from a distance using the existing vehicles remote control. "The SmartTOP customer can already open their top as they move toward their vehicle - a real time saver," explains PR spokesman Sven Tornow. There is no need to make any changes to the vehicles key for this function.

In addition to these two main functions, the SmartTOP module provides numerous features: It makes it possible to open and close the windows via the remote control. All windows can be closed by One-Touch with the button in the driver's door. Additionally, the door can be unlocked automatically when the ignition is switched off, so that it is no longer necessary to pull on the door handle twice.

When starting or stopping the engine, a running top movement is not interrupted. The SmartTOP unit can be completely deactivated if necessary. All functions can be programmed according to personal requirements.

The SmartTOP module is delivered with a plug-and-play adapter. The specially developed plug-in wiring harness makes installation easy. The USB port attached to SmartTOP allows the module to be programmed on a home PC/Mac. Software updates can also be installed, which Mods4cars makes available free of charge to their customers.

The comfort control for the BMW 6 Series Convertible (E64) is now on offer for 169.00 Euro + tax. Modules are also available for the BMW 1 Series, 2 Series, 3 Series, 4 Series, 6 Series (F12), Z4 and Mini models.

Following vehicle brands are supported by the SmartTOP convertible top control: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
