

## **SmartTOP roof top module for Peugeot 207CC now ships with new plug-and-play wiring adapter**

*The SmartTOP aftermarket convertible top control module offered by Mods4cars for all Peugeot 207CC models now ships with an advanced plug-in-between wiring adapter for quicker and easier installation. Original OEM connectors and parts guarantee a perfect and secure fit.*

### **Las Vegas, Nevada – June 5th, 2012**

The SmartTOP convertible top convenience add-on module offered by automotive electronics specialist Mods4cars for Peugeot 207CC models ships with a new, custom designed plug-and-play wiring adapter effective immediately. This new adapter uses original Peugeot parts, so installing the kit now merely requires plugging the adapter in between an existing wiring harness. All connections fit securely.

Thanks to the new wiring adapter anyone can now install the SmartTOP module in minutes and with minimal effort. Only 3 connections need to be made, OEM plugs ensure that all connections fit perfectly and no mistakes can be made during installation.

“We are happy to offer this new, simpler method of installation at no extra cost to our customers“, says PR-Manager Sven Tornow. “We replaced the previously used universal connector with the exact same one Peugeot uses on this car, so the connection fits perfectly.“ he continues. “Removal of the entire kit is possible without leaving any traces.“

The SmartTOP convertible top module allows opening and closing of the top while driving at slow speeds as well as operating the top from the factory key remote. One-touch operation delivers the highest amount of convenience when using either the console button or the remote. The original key fobs do not need to be reprogrammed or replaced.

The module can be configured via the in-dash LCD and the following bonus features are user-programmable: Separate window control from the remote, one-touch close for all windows from the console switch, continued top operation when turning the ignition on or off. Additionally the module can be quickly disabled while retaining all preference settings.

All SmartTOP products come equipped with a standard USB connection and ship with a USB cable for quick and easy PC based firmware updates or module configuration. Support software and updates are available free of charge online. A SmartTOP module is a future-proof investment.

SmartTOP kits are available for the following brands: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and VW.

The add-on kit for Peugeot 207CC is available for 209 Euros + tax.

A demonstration of the module in action can be seen here:

**About Mods4cars:**

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
