

## **A Christmas gift for Peugeot 307 CC Owners - Top Remote Control now available**

*Just in time for Christmas, the retrofit SmartTOP control module by Mods4Cars is now available for the Peugeot 307 CC. It allows opening and closing of the roof, even while driving at slow speeds, with a single touch of the button. Additionally the roof can be operated remotely from the original car key remote fob.*

**Ocean, New Jersey - 16 December 2010**

The SmartTOP control module offered by aftermarket automotive specialist Mods4Cars is available just in time for this year's holiday season. It offers Peugeot 307 CC owners more convenience features for their vehicle: Open and close the convertible top remotely, with the original key fob remote. No separate fobs or reprogramming of the existing ones is necessary.

Thanks to the SmartTOP module operating the roof from the center console button also got easier: The One-Touch feature and the ability to open or close the roof while driving up to speeds of up to 40 km / h (28mph) add more fun to the drive. These functions encourage drivers to make more use of their tops - the awkwardness of having to stop and holding down the button is gone.

A setup menu makes it possible to configure all of the module's features to taste - using the in-car LCD screen. The individual functions of the roof control and their options are displayed in plain text. "We have succeeded in seamlessly integrating the configuration of our top control module into the vehicle system." says PR spokesman Sven Tornow. "We offer our customers a simple and convenient way to customize the SmartTOP module according to their personal desires." he continues.

The latest development from Mods4cars also provides a mode in which an ongoing top operation is not interrupted by starting or stopping the engine. Additionally it is possible to close all four windows automatically with just one short push on the center-console button or from the outside via the original key remote fob.

All SmartTOP modules are equipped with a standard USB port for easy firmware updates as well as configuration in conjunction with a Windows program, both offered free of charge.

With this latest addition to the product portfolio, there is now a SmartTOP module available for each of the three popular Peugeot convertibles, 207CC, 307CC and 308CC.

Other car brands SmartTOP Modules are available for include Alfa, Audi, Bentley, BMW, Ferrari, Ford, Mazda, Mercedes, Mini, Opel, Peugeot, Porsche, Renault, Volvo and Volkswagen - the company Mods4cars offers a SmartTOP comfort module for almost all coupe and roadster models.

The convertible top comfort add-on for the Peugeot 307 CC is available immediately for 249,00 Euro + tax.

A demonstration for Peugeot 307 CC owners can be found here:

**About Mods4cars:**

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
