

SmartTOP convertible top controller for Nissan 370Z roadster available immediately

The aftermarket convertible top convenience add-on kit offered by car electronics specialist Mods4cars is now shipping. It allows top operation while driving slowly at the touch of a button. Additionally the original factory key fob remote can control top and windows from afar.

Ocean, New Jersey – August 15th, 2011

Effective immediately the new SmartTOP convertible top module offered by Mods4cars is available for the Nissan 370Z roadster, giving owners extra convenience and features before this summer is out: The aftermarket module makes it possible to operate the convertible top and the windows from afar via the original factory key fob remote. The original remote does not need to be replaced or reprogrammed.

Additionally, the module adds the convenient one-touch feature to the center console button and allows use of the top at user programmable speeds of up to 40 km/h (~28mph), thereby cutting out the need to pull over and hold down the switch.

„We are pleased to introduce this new module in the middle of the summer convertible season and offer our signature added convenience and features for the Nissan 370Z roadster“ says PR manager Sven Tornow. This latest creation also offers separate control of all windows at once from the remote and via quick double-taps on the center console button.

Like others before, this SmartTOP module allows all features and functions to be programmed to the user's liking: Different chirp sounds when locking and unlocking the car as well as auto locking the doors while driving are user programmable bonus features. Optionally top operation can be set to continue when the engine is turned on or off and the entire module can be turned off quickly, if desired.

Installation is straight forward. The kit comes complete with a custom designed wiring harness in OEM quality. It simply plugs in between some of the connections at the top control unit. This module also comes equipped with a standard USB port for quick and free of charge firmware updates as well as convenient programming of all user setting via PC.

SmartTOP convertible top kits are available for Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

This aftermarket convenience add-on kit for Nissan 370Z roadster is available for 249 Euro + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
