

SmartTOP Comfort Top Controller now available for VW EOS Facelift model 2011+

The aftermarket SmartTOP roof control module offered by Mods4cars is now available for the newest facelift model of the Volkswagen EOS. It allows opening and closing the top at the touch of a button at slow speeds as well as from afar with the original remote fob and comes with new features added.

Ocean, New Jersey – May 17th, 2011

The SmartTOP add-on convenience kit offered by Mods4cars is now compatible with all models of the Volkswagen EOS, from 2006 through now including the new facelift model. In addition to the functions and features of the previous version, two new features were added this time. This gives the user additional convenience to choose from.

The previous version of the SmartTOP controller for VW EOS already offers plenty of features: The convertible top can be opened or closed at the touch of a button and while driving at slow speeds (up to 28mph / 44kmh) or from afar with the original key fob. There is no need to reprogram the key or use additional key fobs.

New features include three different modes of remote operation, selectable by the user, allowing different key combinations to activate the top. Owners who purchased the “Keyless Access” feature with their cars can now also open and close the convertible top, windows and sunroof individually via touch sequences on the door handle, instead of having to dig for the key first.

“We are pleased to offer this new version of the SmartTOP module which adds compatibility to the latest EOS facelift model as well as new and exciting convenience features.”, says PR-manager Sven Tornow. “By means of the USB port present on previously purchased SmartTOP modules our current customers can now quickly and easily update their modules – free of charge.” All Mods4cars modules now offer this standard port, which allows not only updating the module via PC but also simple point and click configuration of all module features and options to taste.

The add-on kit offered by Mods4cars retails for 249,00 Euro + tax and is easy to install for anyone, thanks to the included plug-and-play wiring adapter.

SmartTOP Modules are available for convertibles and roadsters by: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The demonstration video showing keyless access operation is here:

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
