## SmartTOP Convertible top remote control module for Renault Megane CC III

The SmartTOP aftermarket convertible top control module offered by Mods4cars will be available for Renault Megane CC III later this year. It allows the top to be opened and closed at the touch of a button while driving slowly and from afar with the factory keycard remote.

## Ocean, New Jersey, June 20th, 2011

Before this year's convertible season is over, the new SmartTOP convertible module kit offered by Mods4cars will be available for the Renault Megane CC III, adding valuable features to the car: The option to open or close the top while driving at slow speeds (up to 40 km/h / ~28mph) as well as one-touch comfort operation maximize top-down use of the car - No more pulling over and holding down the switch is necessary.

"Our product makes it possible to operate the top from afar by simply using the existing factory key card remote" explains PR-Manager Sven Tornow. "No additional remote or changes to the existing remote(s) is necessary" he concludes. On cars that come equipped with the Keycard Handsfree option it is even possible to open and close the top with touch sequences on the door handle.

This SmartTOP module also comes with a range of extra features well-known from other modules in the series: The entire module can be disabled temporarily and uninterrupted opening and closing of the top while starting or stopping the engine are user programmable options. The module is equipped with a standard USB port for easy PC based configuration and free for life online firmware updates.

The kit ships with a custom designed plug-in wiring harness that allows quick and easy installation. Like many other SmartTOP kits, it uses only original factory plugs and connectors and comes in OEM build quality.

Now the advantages of the SmartTOP comfort controller are available to Renault Megane CC III owners as they have been to convertible owners of the following brands: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The complete kit will retail for 249 Euro + tax when it becomes available.

A preview of the module in action can be seen here:

## About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
