Now shipping: SmartTOP Convertible Top Controller for Renault Megane CC III

The SmartTOP add-on convertible top module offered by aftermarket specialist Mods4cars for the Renault Megane CC III is now available and ready to ship. It allows convenient one-touch top operation while driving at slow speeds as well as opening and closing the top from the original factory key remote fob. It comes with a custom designed plug-and-play wiring harness for extremely simple and quick installation.

Las Vegas, Nevada – January 09th, 2012

Effective immediately, the SmartTOP convertible top kit offered by Mods4cars for the new Renault Megane CC III convertible is in stock and ready to ship. Added convenience features include opening and closing the convertible top at the touch of a button and at speeds of up to 40 km/h (~28 mph). The car will be used with the top down more often, pulling over and holding down the top switch is a thing of the past.

"Our new product also gives drivers the option to open or close their top from afar, with the original key fob", says PR manager Sven Tornow. "No separate remote fob is needed and changes must be made to the existing remote fobs." He continues. Megane owners can now lower the top already while walking up to the car or close the top after parking and getting out. On cars equipped with the "keycard handsfree" option the top can even be operated via touch sequences on the driver's door handle.

The kit comes complete with a custom designed plug-and-play wiring harness for a simple and quick installation. It uses the original Renault connectors and plugs to ensure a perfect fit. The module kit quickly connects to the car electronics without the need to cut or splice separate wires.

Like other modules of the SmartTOP family, it also offers a hand full of bonus features such as a main switch to quickly deactivate the entire module or an extended mode where turning the ignition on or off will not interrupt an ongoing top operation. Thanks to the standard USB connector and a supplied USB cord, all modules can be configured conveniently or the product firmware updated quickly via PC. The support software and all product firmware updates are available online, free of charge, for the life of the product.

The SmartTOP convenience is available not only to Renault owners: Mods4cars offers kits for Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Volkswagen and Volvo. SmartTOP modules are available for almost all modern convertibles and roadsters on the streets today.

The SmartTOP kit for Renault Megane CC III is available for 249 Euros + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
