

Mods4cars offers video in motion unlock for Mercedes Benz models

The aftermarket video in motion unlocking device called SmartTV is available for virtually all Mercedes Benz vehicles with Comand navigation and entertainment system. It allows the passenger to enjoy TV and DVD playback while the vehicle is moving. The unlocker can be activated or deactivated conveniently and on the fly with the steering wheel buttons.

Las Vegas, Nevada – February 23rd, 2012

The video in motion unlocker module SmartTV offered by aftermarket automotive electronics specialist Mods4cars is now available for many Mercedes Benz models. The module enables unrestricted TV and DVD video playback on the navigation monitor while the car is moving and thereby gives the passenger(s) the full entertainment experience. As an example, the passenger(s) may now watch DVD movies during long road trips.

“With the SmartTV product we succeeded in delivering a clever and professional video unlocker solution to all Mercedes-Benz drivers.” says PR manager Sven Tornow. One big advantage over other solutions is the possibility to enable and disable the video unlock on the fly via the steering wheel buttons, another advantage is that this is a permanent solution: a hardware module that directly interfaces with the entertainment system. “This means the unlock stays functional after software updates done by dealers during repair or routine maintenance visits.” Sven Tornow concludes.

The module comes equipped with a standard USB port for easy and convenient firmware updates. Updates are made available by Mods4cars online, free of charge and for the life of the product.

The SmartTV module is compatible with: C-Class, E-Class, CL-Class, CLS-Class, S-Class, ML-Class, GL-Class, GLK-Class, R-Class, SLK Roadster, SL Roaster, CLK-Class and Mercedes-Benz Vito.

Other SmartTV modules are available for: Bentley, BMW, Skoda and Volkswagen.

The SmartTV module is designed and manufactured by Mods4cars. The automotive aftermarket electronics specialist located in Las Vegas, Nevada has been offering the SmartTOP convertible top controller for 10 years. Designed as a hardware module that connects directly to the vehicle's data bus system, these modules allow one-touch opening and closing the top while driving, as well as full control over top and windows from the factory remote key fob.

SmartTOP convertible top modules are available for: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

The SmartTV video in motion enabler for Mercedes Benz is available for 149 Euros + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
