

SmartTOP convertible top modules for Mercedes-Benz SLK R172, E-Class Convertible and Peugeot 308 CC now offer full text setup via in-dash display

The aftermarket convertible top convenience modules offered by car electronics specialist Mods4cars for Mercedes-Benz SLK R172, E-Class convertible and Peugeot 308 CC now offer advanced integration into the car's computer displays. This allows an even easier and quicker configuration of the module from within the car.

Ocean, New Jersey – August 9th, 2011

The SmartTOP aftermarket kits offered by Mods4cars give convertible owners a lot of added convenience and features. They allow opening and closing of the top while driving slowly as well as one-touch operation without the need to hold down the switch. Most kits also enable remote functionality so the top and windows can be operated from the original factory key fob remote.

For owners of Mercedes-Benz SLK R172 and E-Class convertibles as well as Peugeot 308 CC, programming of the user configurable settings has now become even easier: A full text setup menu can be shown on the factory in-dash displays, showing all functions and options in clear text.

“We were able to integrate our convenience modules into the car electronics seamlessly”, says PR manager Sven Tornow. “Our customers get the benefit of a well-rounded solution for choosing their personal preferences, just as if our product was part of the car to begin with.”

Examples of programmable options are window position after top open (up or down), one-touch operation, remote functions, maximum speed for top operation while driving, one-touch operation for the all-windows switch and a quick and easy way to disable or enable the entire module if needed.

SmartTOP modules are available for Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and VW. Mods4cars now offers the convertible top convenience kit for almost all modern convertibles and roadsters on the road today.

Pricing for the kits starts at 249 Euro + tax.

A demonstration of the features along with the full-text setup can be found here:

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
