Mods4cars releases configuration program for SmartTOP Controllers

Mods4cars releases USB configuration program for SmartTOP Convertible Top Controllers that adds convenient adjustment of all preferences via PC to their universal Windows software.

Ocean, NJ – April 7th, 2010

For quite some time now Mods4cars has been shipping their SmartTOP modules equipped with a standard USB port, which allows the modules to be connected to any regular Windows PC. This provides a quick and easy way to update the module firmware right off the internet, improving the modules and their functionality with every firmware release.

The new Software m4cconnect v1.02 now offers even more convenience for all convertible lovers: The personal preferences stored in every SmartTOP module can now be read, changed and written back to the module – with only a couple of mouse clicks.

And just like before it is possible to display the current firmware version installed on each module, check for an update online and flash the module with the latest version if necessary. All module settings and manuals can now also be accessed directly from within the software.

This new software release offers even more convenience to all convertible owners who already have a SmartTOP module installed or are planning to get one in the future. Talking about a future-proof investment: After the initial purchase of a SmartTOP module all updates to the firmware are offered free of charge, making getting stuck with an outdated product a thing of the past.

Further information, manuals and downloads regarding the new m4cconnect software can be found at: http://m4cupdate.mods4cars.com

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of after market roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
