

California, USA.

Mods4cars, the southern California based specialist in high-end electronics for convertible top and remote controls, announced the release of their latest "SmartTOP" comfort roof top control for the new Audi A3 convertible. Customers are now able to raise and lower their convertible top at the touch of a button while driving at low speed or remoteley using their factory key fob.

The new T-Adapter saves 50% installation time. The adapter is included at no extra cost. It allows an simple plug-and-play installation of the SmartTOP module without the need to remove single contacts from the plug. Also, the original condition can easily be restored in seconds.

The SmartTOP-A3 offers plenty of customizable, useful features, in one easy to install product.

This unique comfort controller can be installed by anyone with the help of the detailed installation manual. Installation requires little electronic skills and only standard tools. No soldering! The module comes with all wires and parts needed. No need for extra key fobs. All remote features are activated with the original key remote.

Unique design features only to be found in their product:

- Fully E13 tested and certified: E13 10R-02 4133
- Ultra-low power standby mode (less than 0.1mA).
- InstallAID™ LED shows correct installation and status.
- Intuitive Setup menu for easy customization.
- Universal compatibility to these cars in ONE module:
 - **Audi A4/S4 (B6, B7) Convertible**
 - **Audi TT Roadster Model Year 2007+**
 - **Audi A3 Convertible Model Year 2008+**

Product Features:

- Comfort soft top control while driving: Within a programmable speed limit (A4: up to 40km/h / 25mph, TT and A3: up to 60km/h / 38mph) the roof can be operated automatically with a short push of the open or close button.
- Remote roof control: One-Touch operation of roof and windows with the original remote. Choose if windows should be up or down (A4). On the TT the windows always roll up at the end of the top operation cycle.
- Deluxe Mode allows starting engine during remote roof operation. Also allows turning the engine off, getting out and locking the doors, while the top is still closing.
- For extra safety and visibility: Hazard Lights flash during remote roof operation (if desired).
- Chirp on lock/unlock: If activated, the horn will give brief "chirp"signals when locking/unlocking the car.
- User programmable: All features can be individually enabled or disabled. Some also allow different personal preferences to be set. All settings are retained even if the car battery is disconnected.
- Shop/Diagnose mode: If activated the smartTOP is completely passive, as if it was not installed at all. It becomes invisible to diagnostic tools.

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first smartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of after market roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

All products are designed by a certified engineer, having years of experience on Porsche and Mercedes Benz vehicle electronics. They develop and manufacture according to all European and American (CE, FCC) directives and deliver state-of-the-art electronic onboard control units. Over-voltage protection, reverse polarity protection, safety shut-off and absolutely minimal standby power drain can be taken for granted.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
