

SmartTOP Convertible Top Controller now available for Lamborghini Gallardo Spyder

Effective immediately the SmartTOP Convertible Top Controller made by automotive electronics specialist Mods4cars is available for the Lamborghini Gallardo Spyder. The add-on kit allows owners to open or close the top while driving at slow speeds and with one-touch convenience. Operating the convertible top from the original key fob remote is also possible alongside a host of bonus features.

Las Vegas, Nevada – May 12th, 2014

Just in time for the convertible top season Mods4cars releases the highly anticipated SmartTOP convertible top controller for the Lamborghini Gallardo Spyder. This add-on module brings many intelligent features and enhances convenience. It makes top operation possible while driving at slow speeds and adds one-touch operation to the console switch. It is no longer necessary to stop and pull over.

The kit also enables automatic top operation from the original factory key fob remote. A quick key combination opens or closes the convertible top. "SmartTOP customers appreciate being able to open the top while still approaching their vehicle." says PR-Manager Sven Tornow. "The top-down driving experience begins immediately upon entering the car." No changes are necessary to the keys or the receiver system.

The newest development made by Mods4cars also comes with a host of bonus features: The side windows can separately be controlled by remote, hazard flashers can be activated during remote operation and the console top switch operation direction can be reversed. All features can be individually programmed to taste. An extended mode allows starting or stopping the engine while the top is still moving and the entire module can be temporarily disabled while retaining all user settings.

The SmartTOP module comes equipped with a standard USB port for quick and convenient configuration and firmware updates. Support software for PC and Mac is available free of charge; so are all updates for the module. Existing customers will always benefit from new features down the road.

This product comes with the new, exclusive and custom designed Mods4cars module enclosure. A sleek and slim profile allows mounting it in very tight spaces. The kit comes with a plug-in-between wiring adapter for quick and easy installation by simply plugging in some connectors.

Mods4cars offers SmartTOP modules for the following auto brands: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and Volkswagen.

The SmartTOP Convertible Top Controller kit for Lamborghini Gallardo Spyder is available for 249 Euros + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
