

SmartTOP Add-On Convertible Top Module for Renault Megane CC III reduced in price

Mods4cars, manufacturer of the SmartTOP aftermarket convertible top controller for Renault Megane CC III permanently reduced the MSRP for the kit which now sells for 209 Euros + tax. With the module installed it is possible to open and close the convertible top with just a quick tap and while driving at slow speeds. Additionally the top can be opened or closed from the existing original car remote.

Las Vegas, Nevada – July 1st, 2014

Aftermarket automotive electronics specialist Mods4cars brings in the 2014 convertible top season with a significant price reduction. Effective immediately owners of the Renault Megane CC III will be happy to know that they can pick up the SmartTOP kit for just 209 Euros + tax. "We hope that even more Megane drivers will get to enjoy the benefits of our products and will get to indulge in the top down driving feeling more often." says PR Manager Sven Tornow.

The SmartTOP Convertible Top Controller is an add-on module which brings more features and functionality to the convertible top mechanism. The top can be used while driving at slow speeds and it is not necessary any longer to hold down the switch for the duration of the operation. A quick tap is enough to start full automatic opening or closing.

Additionally the kit allows owners to use their existing remote fob to control the convertible top as well. "SmartTOP customers can walk up to the car while the top already opens itself." Sven Tornow continues. "No changes are necessary to the remote fobs or the receiver system." he concludes.

On cars equipped with the hands free key card system the top can even be controlled via the touch door handle. It is possible to activate an extended mode which allows starting or stopping the engine while the top operation continues. A one-touch feature for all windows is also included. The entire module can be temporarily disabled for situations in which the car is handed over to others while retaining all user configurable settings for when the module is re-enabled. All features and functions can be adjusted to individual taste and desire.

The SmartTOP kit comes complete with a plug-and-play wiring harness. This custom designed wiring adapter makes installation quick and easy by simply connecting plugs. The SmartTOP module also houses a standard USB port for quick and easy configuration and firmware updates via PC or Mac. Updates and support software are available free of charge online.

SmartTOP Convertible Top Modules are available for: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo. A kit is also available for the Renault Megane CC II. After the recent price reduction the kit for Renault Megane CC III now sells for just 209 Euros + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
