

Video-in-motion unlocker SmartTV by Mods4cars for new Mercedes-Benz S-Class

The SmartTV retrofit video-in-motion unlocker offered by Mods4cars is available for the new Mercedes-Benz S-Class (Model 222) effective immediately. It allows passengers to use the TV and DVD playback features of the entertainment system on road trips. The SmartTV module only needs to be installed in the car in order for the unlock provided by it to stay enabled permanently.

Las Vegas, Nevada – June 17th, 2015

As of today the video-in-motion kit called SmartTV made by aftermarket automotive electronics specialist Mods4cars is available and in stock for the new Mercedes-Benz S-Class (Model 222). With this retrofit kit installed, the center console entertainment system's TV tuner and DVD playback can be used while the car is driving. This allows front and rear passengers to use and enjoy multimedia features on long trips.

“Our SmartTV video-in-motion module offers a clever and professional approach at unlocking multimedia features while driving.” explains PR-Manager Sven Tornow. This module stays installed hidden in the car and its functionality is permanent even if the dealer may perform some component software updates. The unlock can even be activated and deactivated on the fly with a quick key combination on the steering wheel.

The SmartTV module comes with a standard USB port for quick configuration and firmware updates. Support software for Windows and Mac as well as firmware updates are provided by Mods4cars online, free of charge. This ensures that the product can always be kept up to date. The module can be completely disabled temporarily if needed and eventually removed without leaving damage, since no wires need to be cut or spliced during installation.

The SmartTV video-in-motion kit is compatible with many modern Mercedes-Benz Models: S-Class, CL-Class, C-Class, GLK-Class, GL-Class, E-Class, R-Class, CLS-Class, SLK-Class, CLK-Class, ML-Class, SL-Class and Vito. For other popular brands like Bentley, BMW, Skoda and Volkswagen compatible SmartTV kits are available as well.

The video-in-motion kit for the new S-Class is available for 149 Euros + tax.

The SmartTV represents another convenience product line offered by Mods4cars. Since 2002 Mods4cars has been producing convenience and convertible top controller modules which make using features of the cars easier on a daily basis. The main features of the SmartTOP Convertible Top Controllers are one-touch operation of the top while driving as well as control of the top from the original key fob remote. SmartTOP kits are available for all modern convertibles on the road today.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
