

SmartTOP additional top control for the Chevrolet Corvette C7 is now available

As of now the SmartTOP control from Mods4cars is also available for the Chevrolet Corvette C7. The retrofit convertible module enables the operation of the convertible top while driving with one touch function. In addition, the roof can be opened and closed from afar via the cars key.

Las Vegas, Nevada – September 21, 2016

The manufacturer Mods4cars announces that the retrofit SmartTOP control for the Chevrolet Corvette C7 is in stock. "We have listened to the multiple customer inquiries and are happy to now offer a comfort smart solution for the Corvette C7," says PR spokesman Sven Tornow.

The roof module made by Mods4cars is retrofitted into the vehicle and lightens the convertibles day to day with clever additional features. The SmartTOP enables one-touch operation of the convertible top. The interior button must therefore not be held down throughout the entire top motion movement. Instead a quick tap is enough for the roof to be opened or closed automatically.

Furthermore, the operation of the roof from a distance is made possible via the original vehicle keys. Top motion can then be initiated with a combination of keys on the remote control. The corvette driver can then already open their top when moving toward the vehicle. Conversely, it is also possible to close the roof from a distance, e.g. if it suddenly begins to rain. No changes to the original vehicle key is required.

Like every SmartTOP, the comfort module also offers useful additional functions for the Chevrolet Corvette C7. "A very special feature is the automatic raising of the window after closing the top," explains PR spokesman, Sven Tornow. "It is no longer necessary to manually put up the window after the top motion movement. This saves time."

In addition, the windows can be opened and closed via the remote control. Starting or stopping the engine does not interrupt the current top motion. The module can be deactivated at any time. And all functions of the SmartTOP roof module can be programmed to your personal wishes.

A mounted USB port on the SmartTOP module allows connection to a home PC/Mac. Thereby, the roof module can be easily configured. Moreover, uploading of software updates is made possible, which Mods4cars offers free of charge.

The included plug-and-play cable set and ease of access ensure for an easy installation. With a simple interlock, the connection between SmartTOP and vehicle electronics is established. No lines need to be cut, which is why a traceless dismantling is possible at any time.

The comfort control for the Chevrolet Corvette C7 is available for 339,00 Euro + tax.

Mods4cars offers SmartTOP comfort modules for the following vehicle brands: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
