

SmartTOP additional convertible top control for Ford Mustang Convertible now available

As of now, the retrofit SmartTOP convertible top control from the company Mods4cars is available for the Ford Mustang Cabriolet. It allows the top to be opened and closed while driving with One-Touch. A short press on the button activates the automatic top movement.

Las Vegas, Nevada – May 9, 2018

The company Mods4cars is now offering its retrofit SmartTOP convertible top control for the 6th generation Ford Mustang Cabriolet. "We are pleased to now also offer a smart convertible top solution for the Ford Mustang Convertible," said PR spokesman Sven Tornow. SmartTOP modules are additionally installed into the vehicle to make the usability of the convertible top more comfortable.

After installation, the Mustang driver is able to open and close their convertible top while driving at a speed of up to 50 km/h with One-Touch. All you need to do is tap the interior button. The top movement is then carried out automatically. "This way the driver has both hands on the steering wheel faster," explains Sven Tornow.

In addition to this main function, the SmartTOP also has other clever features: You can configure it so that the top opens automatically after unlocking, without having to press additional buttons. Furthermore, it is possible, when starting the vehicle, for Sport Mode to automatically activate. Also starting and stopping the engine does not interrupt the current top movement.

All functions can be programmed according to personal wishes. Among other things, you can gradually select the speed at which the top movement can be carried out while driving. Thanks to an USB port attached to the module, configuration can easily be done via a PC/Mac. In addition, the USB port allows software updates and feature enhancements to be uploaded, which Mods4cars provides, free of charge.

For easy installation, the SmartTOP module comes with a plug-and-play adapter set. The specially developed adapter set has connectors in OEM quality and ensures a simple connection between vehicle electronics and SmartTOP module. No cables need to be cut through, therefore, a residue-free removal is possible at any time.

Since 2001, the company Mods4cars has been producing its SmartTOP additional top controls. From Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen to Volvo. All popular convertible and roadster models are supported.

The SmartTOP comfort control for the Ford Mustang Convertible is available for 249.00 euro + tax.

About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
