

## **SmartTOP convertible top control by Mods4cars for Audi R8 Spyder 4S now available**

*The retrofit SmartTOP convertible top control by the manufacturer, Mods4cars, is now available for the Audi R8 Spyder 4S. It allows the top to be opened and closed from a distance with the original vehicle key. In addition, the movement of the top while driving is made possible via One-Touch.*

### **Nevada, Las Vegas – June 27, 2018**

As of now, the SmartTOP convertible top control by Mods4cars is available for the new Audi R8 Spyder 4S, from model year 2016 on. "We are pleased that we can now also offer a SmartTOP for the new R8 Spyder. We have been supporting the predecessor model since 2013," explains PR spokesman, Sven Tornow.

The retrofit convertible top module provides clever additional functions for a more comfortable top operation. For one, it enables the operation of the top while driving with One-Touch. The top button no longer needs to be held down during the entire movement of the top. SmartTOP owners only need to tap the interior button once and the roof opens or closes automatically.

In addition, the SmartTOP convertible top control allows for the operation of the top via the vehicle's existing remote control. "Opening and closing the top from a distance with the car's key is a very popular feature. Our customers can open their top as they are approaching their vehicle," continues Sven Tornow. This function uses the original vehicle remote control. No modification is needed for this function.

Furthermore, every SmartTOP module comes with numerous additional features: enabling all windows to be opened and closed via the remote control. On vehicles with a keyless entry package, it is made possible to open or close the top by touching the door handle. The position of the windows after the top's movement can be set, and the operating direction of the top button can be reversed if wished. Any current top movement is not interrupted by starting or stopping the engine.

By factory, the car cannot be locked via remote while the engine is running, therefore, upon customer request, the function "Lock running car" has been added. It allows locking the doors from the outside via the remote control while the engine is running.

The module is also made to allow for an easy installation. The SmartTOP roof module is supplied with a plug-and-play adapter, which ensures an easy connection between SmartTOP and the vehicle electronics. The attached USB port then helps with the configuration of the module, allowing the SmartTOP to be connected to the PC/MAC and programmed according to your own wishes. With it, software updates, provided free of charge by Mods4cars, can also be uploaded.

The product for the new Audi R8 Spyder 4S is available for € 299.00 + tax.

SmartTOP convertible top controls are also available for Audi cabriolet models A3, A4 and A5 as well as for the TT Roadster. The following car brands are also supported: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen to Volvo.

**About Mods4cars:**

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
