

SmartTOP roof control for BMW 3 Series convertibles enables top operation via One-Touch

The retrofit SmartTOP convertible rooftop control by the manufacturer, Mods4cars, allows for the opening and closing of the convertible top while driving with just a short press of a button for all BMW 3 Series models. In addition, the convertible top can be operated from a distance via the original vehicle key.

Las Vegas, Nevada – January 10, 2019

SmartTOP rooftop modules by the company, Mods4cars, simplify everyday convertible life with clever comfort and functional enhancements. The retrofit SmartTOP allows owners of BMW 3 Series Cabriolets E46 and E93 rooftop control while driving with just one touch of a button. Thanks to One-Touch, the convertible top opens and closes automatically after a brief tap on the interior button. The impractical continuous pressing down of the button is thereby omitted.

In addition, the product from Mods4cars, also enables the possibility to open and close the convertible top from afar via the vehicles original remote control. "SmartTOP customers can open their convertibles top as they are approaching their vehicle," explains PR spokesman Sven Tornow. The vehicle key does not require any changes or programming for this function.

In addition to these two main functions, SmartTOP modules also have individual additional functions: For example, the windows of the BMW 3 Series models can be opened and closed via the remote control. Position of the windows after the tops movement can be programmed to personal preferences. When engaging the reverse gear, the passenger mirror can be set to automatically be folded.

The module allows for complete deactivation as required. Starting and stopping the engine, does not interrupt the current top movement. Furthermore, a standard USB port is integrated in the module. This allows for the configuration on the home PC and the installation of software updates. These updates are made available to customers free of charge.

The SmartTOP convertible top control is retrofitted into the vehicle. For quick and easy installation, the cabriolet module comes with a specially developed plug-and-play cable set. The connection between the vehicles electronics and SmartTOP module is made by simply plugging together. Cable sets in original equipment quality guarantee a 100% accurate fit. Cutting through of cables is not required.

The comfort upgrade is available for BMW 3 series convertibles E46 and E93 from 269.00 Euro + tax.

SmartTOP roof modules are available for BMW models 1, 2, 3, 4, 6, Z4 and Mini. The following vehicle brands are also supported: Alfa, Audi, Bentley, BMW, Chevrolet, Ferrari, Ford, Infiniti, Jaguar, Lamborghini, Land Rover, Maserati, Mazda, McLaren, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

About Mods4cars:

Mods4cars was founded in 2002 from the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
