

SmartTOP Convertible Top modules with plug-and-play wiring adapters

Most SmartTOP aftermarket convertible top modules come bundled with a plug-and-play wiring adapter that simply plugs in between existing connectors. This makes it possible for anyone to install the kit in minutes.

Las Vegas, Nevada – September 12th, 2011

The SmartTOP roof control modules offered by Mods4cars for Alfa, Audi, Ford, Infiniti, Mazda, Mercedes-Benz, Nissan, Peugeot, Renault, Volvo and VW now all ship with full plug-and-play wiring adapters. These are custom designed harnesses using original OEM plugs and connectors that simply plug in between existing connections without the need to solder or splice any wires. A 100% fit of all electrical connections is guaranteed.

Thanks to the custom in house engineered wiring kits the modules can be installed by anyone in just minutes. In most cases all it takes is removing one connector from the convertible top controller box and plugging the wiring kit in between.

“Our latest wiring kits make it impossible to accidentally swap any connections. No more cutting, splicing or handling single wires is necessary.” explains PR-Manager Sven Tornow. “To install one of our modules one simply removes one connector from the controller box and plugs our adapter that comes with every kit in between – that’s it!” he concludes.

The two main features of all SmartTOP convertible top modules are one-touch top operation while driving (on some models up to 60kmh / 35mph) as well as remote operation of the top from the original factory key fob (on most models). Top operation is fully automatic with no need to push and hold any switch or button.

Each module also offers several model dependent bonus features: Some allow chirping the horn or siren when locking or unlocking the car, some allow automatic door locking and unlocking or defining the desired position of the windows after opening the top. All modules can be turned off completely if needed and come with a standard USB port for simple and easy setting of all user configurable parameters via PC or laptop as well as quick and easy firmware updates. The software program and all firmware updates are available free of charge.

Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and VW – all of these popular brands are supported by the SmartTOP product line. Mods4cars offers modules for almost all modern convertibles and roadsters on the road today.

The convertible top fun is available for 209 Euros + tax and up.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Nevada and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
