

The SmartTOP roof control unit for Peugeot 207 CC and 307 CC can now be programmed via the dash display

The retrofit SmartTOP roof control unit for Peugeot 207 CC and 307 CC from Mods4cars boasts a setup menu, enabling configuration via the existing dash display.

Ocean, New Jersey – December 29, 2010

The SmartTOP roof top control unit allows customers to open and close their convertible top at the touch of a button while driving at slow speeds, or remotely using the original key fob.

The Mods4cars roof top control offers Peugeot 207 CC and 307 CC owners added comfort and function for their vehicles: a setup menu facilitates configuration of the controller via the existing dash display. The individual options of the roof control unit are displayed in plain English.

Users choose if windows should be up or down after operating the convertible top, and can also program the max speed for on-the-go top operation. Moreover, it is possible to activate an additional function, enabling one-touch operation of the windows with the original remote. All controller features can be individually enabled or disabled.

"We have been able to fully integrate configuration of our roof control unit in the vehicle," explains PR Manager Sven Tornow. "This latest innovation provides our customers with a simple and comfortable way of customizing the SmartTOP controller," he adds.

However, it is not just Peugeot owners who benefit from SmartTOP controllers. Mods4cars supplies its SmartTOP comfort controller for almost all convertible and roadster models from a wide variety of manufacturers, including Alfa, Audi, Bentley, BMW, Ferrari, Ford, Mazda, Mercedes, Mini, Opel, Peugeot, Porsche, Renault, Volvo, and Volkswagen.

The convertible top controllers for Peugeot 207 CC and 307 CC are available for as little as €249,00 + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
