SmartTOP roof module for Porsche Carrera Convertible now with plug-in wiring harness and USB port

The SmartTOP convertible top add-on module for Porsche Carrera offered by aftermarket electronics specialist Mods4cars now ships with a custom designed plug-and-play wiring adapter. Additionally, the module comes with a standard USB port for PC based configuration and updates as well as a new feature: The position of all windows (up or down) after top open is now user programmable.

Las Vegas, Nevada – April 18th, 2012

The SmartTOP convertible top add-on module for Porsche Carrera 997 ships with a custom designed plug-and-play wiring adapter effective immediately. This new wiring harness is a professional solution using only OEM parts for best compatibility and fit. It makes installation possible for anyone in the shortest amount of time.

"This new wiring adapter makes installation even easier and totally foolproof, while keeping the existing simple approach", says PR manager Sven Tornow. Thanks to this new wiring harness, the module itself does not have to be plugged into the top controller any more. Instead it can be conveniently mounted in an area nearby.

The SmartTOP kit allows opening and closing the top while driving at slow speeds or from the factory remote fob, adding convenient one-touch operation to both. The original key fob does not need to be altered or reprogrammed. A new feature in this version of the module allows users to determine if they want all windows up or down after a top open cycle.

Additional user configurable features include convenient operation of the rear windows from the front switches, a chirp signal when locking and unlocking the car, passenger mirror adjustment in reverse gear, remote control of the high beams and automatic door locking and unlocking while driving. The entire module can as well be temporarily turned off, while preserving all user settings.

Like other modules of the series, this SmartTOP product comes with a standard mini USB port and a USB cable for easy and convenient firmware updates and user setting configuration via (Windows) PC. Support software, manuals and firmware updates are available free of charge online.

Not just Porsche owners can get the benefits of the SmartTOP series. Kits are available for: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and VW – Mods4cars carries a SmartTOP module for almost all modern convertibles and roadsters on the roads today.

The SmartTOP kit for Porsche Carrera 997 convertibles is available for 299 Euros + tax.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
