

RemoteKEY Convenience Controller by Mods4cars reduced to 99 Euros

Automotive aftermarket electronics specialist Mods4cars permanently reduced the retail price for it's Audi A2 RemoteKEY convenience add-on module. This module allows owners to open and close all windows from the factory remote. Additionally the sunroof can be closed remotely as well. All operations are "one-touch" enabled and don't require any buttons to be held down. The new MSRP is 99 Euros + tax.

Las Vegas, Nevada – July 10th, 2012

Effective immediately, the RemoteKEY convenience add-on module for Audi A2 has been reduced in price and is now available for 99 Euros + tax instead of 169 Euros + tax. The easy-to-install kit adds a handful of features to the car that make every day use more enjoyable.

All windows can be opened or closed from the original factory remote fob with convenient one-touch operation. The original key fob does not need to be altered or replaced. Another feature is the ability to close the sunroof from the remote. This allows owners to quickly close the sunroof from afar without having to run to and sit inside the car, should they get caught with the car parked outside in a summer storm.

"We are entering the summer season with a decent price reduction, to enable more A2 owners than ever to enjoy our intelligent convenience module, which makes daily use of their cars even more fun." says PR-Manager Sven Tornow. Another really neat feature is remote activated unlocking of the fuel cap. No more need to walk around to the driver's side to press that hidden switch.

Other options include fully-automatic closing of all windows and sunroof upon locking the car, so neither can ever be "forgotten" again. Also it is now possible to control all four windows at once with a switch combination on the driver's door and the module can be programmed to automatically lock the doors while the car is in motion.

The module can be temporarily disabled if needed while retaining all other user configurable settings. It comes equipped with a standard USB port for quick and easy firmware upgrades and PC or laptop based module configuration. Support software and updates are available free of charge on the outfit's website www.mods4cars.com.

Installation is quick and easy, thanks to a custom designed plug-in-between wiring adapter which uses OEM plugs and connectors. The connection between the RemoteKEY kit and the vehicle electronics is easily made by just plugging the connectors in between. No wires need to be cut or spliced. Complete removal is always possible.

Mods4cars has been developing specialized convenience and convertible top controller modules since 2002. Kits are being offered for: Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volkswagen and Volvo.

A demonstration of this product for Audi A2 can be found here:

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
