

Now available: SmartTOP convertible top remote and convenience module for Infiniti G convertible

Just in time for the convertible season Mods4cars releases the new SmartTOP convertible top convenience module for Infiniti G convertibles. It adds one-touch operation to the center console switch as well as the ability to use the top while driving slowly. Additionally the top can be raised or lowered from afar with the original factory key fob remote.

Ocean, New Jersey – August 1st, 2011

The SmartTOP convertible top convenience add-on module by aftermarket electronics specialist Mods4cars is now available to order. Infiniti owners get to enjoy this summer with more convenience and added features in their cars. The signature feature of the kit, one-touch top operation while driving, allows drivers to open and close the top while driving up to 40 km/h (~28 mph) and without the need to pull over and hold down the switch. The instant benefit is more top-down time.

“Our newest product also adds remote control functionality; The top can be opened or closed with the original factory key fob remote.” says PR manager Sven Tornow. “Neither is a separate key fob required, nor does the existing one need to be modified or reprogrammed.” He concludes. It is also possible to raise and lower just the windows by remote or when inside the car with a quick double tap on either direction of the top switch.

The SmartTOP convertible top convenience kit for the Infiniti G convertible also offers some extra features which are all individually programmable. It is possible to have the doors locked automatically while driving or a choice of 4 different sounds when locking and unlocking the car can be selected. An ongoing top operation can be programmed to continue when the engine is turned on or off and the entire module can be enabled or disabled while retaining all other user preference settings.

Thanks to the standard USB port present on all SmartTOP convertible top modules it is also possible to configure all settings or update the product firmware online via freely available software on the company’s website. The kit comes complete with USB cable and a custom designed, fully plug-and-play wiring harness that makes installation a breeze.

Other car brands supported by the SmartTOP product line are Alfa, Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo and Volkswagen – Mods4cars offers the SmartTOP convenience kits for almost all modern convertible and roadster models on the road today.

The module for Infiniti G convertible is now available for 249 Euro + tax.

A demonstration of the module’s functions can be found here:

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
