

## **SmartTOP convertible top module for Mercedes-Benz SLK, CLK & SL with added function**

*The SmartTOP add-on module for Mercedes-Benz SLK type R171, CLK type A209 and SL type R230 allows the convertible top to be opened and closed while driving with a one touch function. The top can also be operated from the original key fob. Now Mods4cars has added an additional function to their product: The window positions after top operation can be programmed.*

### **Las Vegas, Nevada – November 29th 2012**

The SmartTOP aftermarket convertible top module offered by Mods4cars allows the opening and closing of the roof while driving at speeds of up to 60 km/h (37mph). Thanks to the one-touch function, a short key press on the console button is all that is required to operate the top. Additionally, one-touch roof top handling is possible from the original key fob.

Mods4cars has now added an additional function to their convertible top module: The window positions after roof top opening can be programmed. By configuring the module, the customers can decide whether they want to have the windows opened or closed after top operation.

“The new function makes it possible to program the module more precisely according to our customers’ desires.” says PR manager Sven Tornow. “Convertible drivers who want to enjoy the feeling of an open car can program the module so that the windows are down after opening the roof. Drivers who want to drive more comfortably can program the windows to be closed. The new function makes any additional use of the window buttons obsolete.” declares Sven Tornow.

Also existing customers can benefit from this added function. The SmartTOP modules come equipped with a standard USB connection, which allows installation of free firmware updates offered by Mods4cars on their home page. Every SmartTOP owner can benefit from future function extensions.

The SmartTOP module offers many more features: The windows can be opened and closed separately via remote key fob and by one-touch function just with a double click. If desired, a short chirp can sound after using the central locking. And having the module automatically lock and unlock the doors while driving is an option, too. As a coming-home-light the headlights can be activated via remote key fob. Starting the engine or turning the ignition off while the top is moving will not interrupt the operation. The complete removal of the entire kit is possible at any time.

From Alfa via Audi, Bentley, BMW, Ferrari, Ford, Infiniti, Mazda, Mercedes-Benz, Mini, Nissan, Opel, Peugeot, Porsche, Renault, Volvo up to VW, Mods4cars offers SmartTOP modules for nearly every convertible car or roadster. Also for the previous types SLK R170, SL R129 and the follow up types SLK R172, SL R231 and the E-Class convertible.

The SmartTOP module for Mercedes-Benz SLK type R171, CLK type A209 and SL type R230 is available for 249 Euros + tax.

A demonstration of the module in action can be seen here:

**About Mods4cars:**

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full-fledged international corporation with an office in Las Vegas and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of aftermarket roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
