

Mods4cars extends product line of SmartTOP add-on modules

World Premiere: With the introduction of their newest SmartTOP modules, Mods4cars now offers the world's first aftermarket convertible top controller for the Audi A5 convertible, the Volvo C70 hardtop convertible, the Opel (Vauxhall) Astra Twintop, the brand new BMW Z4 Roadster and the Mini Cooper convertible.

Ocean, NJ – March 23, 2010

Those who like to go topless and want to add extra convenience to their automated drop tops will find that the SmartTOP add-on modules offered by Mods4cars do just that. Engineered in Germany and made in the USA, the modules add many customizable options to an ever growing number of supported vehicles. The two key features, one-touch top operation while driving and the ability to remotely control the top from the factory key fob, have been the driving force behind the SmartTOP for the last 10 years.

“Our goal is to offer a SmartTOP controller for every modern convertible car” says Mr. Tornow, the company's PR-Manager. This goal is within reach, as modules are already available for Alfa, Audi, Bentley, BMW, Ferrari, Ford, Mercedes, Mini, Opel (Vauxhall), Porsche, Volvo and VW - covering every major brand.

With the addition of four new multi-functional SmartTOP modules for Audi A5, BMW Z4, Mini Cooper, Volvo C70 and Opel (Vauxhall) Astra Twintop, Mods4cars remains the industry leader in aftermarket convertible top technology and offers even more drivers the opportunity to upgrade their cars with a SmartTOP - a convenience that once experienced, is hard to live without.

Interested owners of any of the cars listed above can see for themselves what the new modules have to offer:

Existing SmartTOP modules with USB connector get firmware updates:

Customers are now able to update the software using the integrated standard USB port and a personal computer running Windows XP / Vista. Software updates will be available at www.mods4cars.com. Mods4cars offers free lifetime updates. New firmware files are available for most of the previous modules. They enhance functionality and compatibility for more convenience and fun with Convertible and Roadster.

About Mods4cars:

Mods4cars was founded in 2002 with the idea to add a highly demanded feature to the otherwise almost perfect Porsche Boxster: Comfort One-Touch roof operation while driving at slow speeds. The resulting product offered not only that, but also allowed quick and easy installation by just swapping out a relay box, thus leaving no traces and no permanent changes on the vehicle. The first SmartTOP roof controller was born.

The success of their first products in Germany and Europe prompted them in late 2004 to move operations to the USA, to be able to serve the American market as well as all other English speaking countries such as Australia, UK and South Africa from one central location. Their business has grown to a full fledged international corporation with an office in California and a full line of innovative products as well as distributors and installation partners all over the globe.

Being highly specialized in the development and distribution of after market roof- and comfort controllers since 2002 allows them to offer an unsurpassed level of competence and product quality. Their main goal is optimization of each individual product to a maximum in compatibility, usability and intuitive operation. They put greatest effort into development and quality checks of all their products to achieve this goal and meet all expectations of their customers.

The extraordinary success of their products is also based on the great communication with their customers, which usually already starts for each new product during the development and prototyping phase.
